

With fine adjustment, suitable for drinking water.

Brass ball valves in the standard series with fine adjustment. Unlike our classic standard ball valves (open-close function), this model features a special stem technology that allows finely modulated opening and closing of the line. The flow rate can be regulated extremely precisely as a result. The cock is made of low-lead brass with a bare brass surface on the inside. It is thus safe to use with drinking water. This valve complies with the European standard EN 13828 and the working paper DVGW W 570.

Housing	Nickel-plated brass (outside) Brass (inside)
Ball	Chrome-plated brass
Ball seal	PTFE
Stem seal	NBR
Wheel	Plastic
Operating temperature	-15 °C to +100 °C
Thread	G thread acc. to DIN EN ISO 228-1

335.06

Ball valves, lightweight type, with fine adjustment, female/female thread
